Theme Homework: Be an inventor!

Directions: If you were going to create a system to make the beginning of the school year easier, what would you create? Describe your creation using as many details as possible. Don't forget to include the purpose of your invention.

System: a set of parts that work together to form a whole and serve a purpose

The purpose of my invention make us look at the teacher when she rings the chime. Everybody would have a little robot. It looks like a little cube about two inches tall and two inches wide. You put it on your desk and this robot cube is sensitive when it hears the noise of the chime or clap. It will unfold into a robot. If the person it belongs to isn't looking at the teacher it will get the students' attention and say "look at the TEACHER!!" That is my system...

I would create a pencil finder. It would be made of a small strip of card board and a bent tomato can lid. The lid would be used as the finder and the card board would be taped to the lid. You would hold the end of the card board and the lid would reach to the end of the back of your desk. The purpose of the pencil finder is to get the pencils from the back of your desk where you can never reach.

System: a set of parts that work together to form a whole and serve a purpose

I would create a homework packing machine. The machine would go around the house and pack every thing you need to put in your bag. It could also tie your shoe laces and carry your back pack to school, but you will need to type in to the machine what you would like it to do.

System: a set of parts that work together to form a whole and serve a purpose

I would make a homework machine and it would work like this. I would tell it what to do by talking to it then it would gather up the words I said in its brain and write it down. I would make it like this, I would buy wood with a hole in it for the wires. I then get a robot brain because nothing can do a thing without a brain. The brain would be put on the head of the robot. All the wires would be connected to the brain like blood vessels. The ear would be a speaker and that's all.

Focus candy machine -
a machine that when
kids are having a hard time
they go to it, grab a
candy, suck on it and it
will help them focus.
The machine will look like
a big clear plastic cabinet.
With a little box on the
bottom, that you need
to open to get the
candy out!

I would create
a robot that would
help teachers! At the
beginning of the year
teachers are very busy
so the robot would
help the teachers!
The robot would have
electricity and would
go on wheels!
